SUMMARY

Developer with 17 years of experience in high-volume e-commerce, working with .NET/C#, Node.js with TypeScript and Python. Experience building and maintaining REST APIs, distributed systems and asynchronous processing, with SQL Server, MySQL, Redis, Docker and CI/CD pipelines on GitHub Actions and AWS, as well as monitoring and observability with Datadog and Grafana. I am currently developing the backend of a SaaS management platform in .NET 10. I bring AI assistants into the development workflow, always reviewing critically what is generated. My work is guided by SOLID and Clean Architecture, aiming for clean, testable code that is easy to evolve.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Perl, Python

.NET: .NET 10 / .NET 8 / .NET 6, .NET Core, .NET Framework, ASP.NET Core, ASP.NET MVC, Web API, Entity Framework Core, Dapper, ADO.NET, WPF, WCF, Hangfire

Node.js: NestJS, TypeORM

Data: SQL Server, MySQL, Redis

Infrastructure: Docker, Podman, GitHub Actions (CI/CD), Git, AWS, SQS, Azure

Observability: Datadog, Grafana

Architecture: REST APIs, microservices, distributed systems, asynchronous processing, multi-tenant architecture, SOLID, Clean Architecture

Testing: NUnit, Moq, regression testing

AI in development: Claude Code and Gemini for code generation and review, refactoring and support in analyzing legacy codebases; creation and maintenance of skills and tools; Spec-Driven Development (PRDs and technical specifications)

Front-end: Angular, React, HTML, CSS

Processes: Scrum, Kanban

Portfolio: Go (Golang), Messaging with Kafka/RabbitMQ brokers, NoSQL

PROFESSIONAL EXPERIENCE

.NET Backend Developer

Independent project (freelance) | March 2026 - Present

- Backend development for a SaaS platform for horse breeding farm management (herd, breeding, inventory, auctions, invoicing and billing), with REST APIs in C# and ASP.NET Core (.NET 10), Entity Framework Core and SQL Server.
- Multi-tenant architecture in which each customer has its own database.
- Delivery of features in the breeding, inventory and financial modules, such as paginated cycle listings, the inventory report, cancellation of bank slips (boletos) on invoices and date-range filters in billing management.
- Fixing of production bugs with a focus on data integrity: atomic operations, inventory consistency and breeding business rules, always with regression tests (NUnit, Moq).
- Daily use of AI (Claude Code) to write PRDs and technical specifications, review code and document changes.

Senior Full Stack Developer

KaBuM! | February 2021 - September 2026

- Development and maintenance of internal APIs and services in Python, Node.js with TypeScript, NestJS and TypeORM, integrated with MySQL and Redis, in an e-commerce environment with a high volume of requests.
- Work on application stability and availability, with monitoring and incident investigation through Datadog and Grafana.

- Implementation of asynchronous communication between services using Amazon SQS and a database-persisted queue (queue table pattern), covering enqueueing, consumption and message state control.
- Evolutionary maintenance and bug fixing of legacy Perl systems, keeping critical operations running.
- Containerization of applications with Docker and build and deployment automation with GitHub Actions.
- Support and evolution of web interfaces in Angular, HTML and CSS.
- Integration with third-party platforms.
- Adoption of AI assistants (Claude Code and Gemini) in the development workflow, applied to reading legacy code, refactoring and writing new features, always with human validation and review before merging.

Full Stack .NET Developer

Data System | April 2012 - January 2021

- Development and evolution of the sales, POS, inventory, financial, tax and reporting modules of SIAC/USE, a management system for footwear and clothing retail and wholesale, in C# with .NET Framework and WPF.
- Creation and maintenance of WCF services and migration of legacy services to REST APIs with ASP.NET Web API.
- Development of web applications with ASP.NET MVC.
- Data access on SQL Server with Dapper, ADO.NET and Entity Framework, including writing and optimizing queries.
- Took part in the migration of the legacy Delphi and Firebird system to .NET Framework with C# and SQL Server.
- Maintenance of retail tax routines, with issuance of Brazilian electronic tax documents (NF-e, NFC-e and SAT).
- Bug fixing and production incident support for client stores; teamwork with Scrum and Kanban and version control with Git.

Systems Analyst / Technical Support

Brainsoft | October 2009 - November 2011

- Development in Delphi of retail systems: POS, inventory control, financial administration and fleet management, including import and export of tax data.

EDUCATION

Postgraduate Degree in Mobile Application Development · Anhanguera Educacional 2020 - 2021

Bachelor's Degree in Computer Science · Anhanguera Educacional 2012 - 2015

Technical Degree in Information Technology · COTIL / UNICAMP 2008 - 2009

LANGUAGES

English: advanced reading and writing (technical documentation, code review, written communication); good listening comprehension; intermediate conversation
